

Architrave & Skirting Meranti Veneer

Porta's Meranti Veneer Architraves are cost effective and can outperform solid wood alternatives in terms of stability, quality, consistency and appearance.

- 1 Real timber substrate – The substrate is strong and durable timber.
- 2 Strong bond – The bond strength of the veneer and substrate has been tested to AS/NZS 4266.33:2004.
- 3 Premium finish veneer – Only premium grade timber veneer is used on the product face.

Features & Benefits

- Competitively priced
- FSC® certified timber
- Barcoded for easy scanning
- Set length packs reduce in-store cutting, improve staff productivity & safety

Timber Tips

Sanding

- ✓ It is recommended that you lightly sand before staining/painting and between coats.
- ✓ Splice lines – during the manufacturing process veneers are joined together so a fingerjoint may be seen on each piece. To eliminate the visibility you can sand before and between coats.
- ✓ A 240 grit sandpaper is recommended

Fixing

- ✓ Pre-drill recommended to prevent splitting.
